ATTRIBUTION FOR AI-ENHANCED CREATIVE CONTENT (AACC)
A transparency framework for creators.*

AI-MODIFIED (AI-EDITED)

1

The creator produces the original content. AI modifies or edits technical aspects, language, or structure for improved clarity, organization, or presentation.

Attribution: By [Creator Name], AI-modified by [AI Name] or AI-edited by [AI Name]

Poetry Example: "Mercury." By Sarah Chen, AI-Edited by Claude AI (word choice and line break suggestions)

Use Examples: Writer edits with AI tools; filmmaker grades color with AI; musician masters audio with AI

AI-ASSISTED

2

The creator and AI collaborate throughout much of the creative process. Though creator-driven, AI generates substantial elements that the creator selects, significantly modifies, or integrates into their vision.

Attribution: By [Creator Name], AI-assisted by [AI Name]

Film Example: *Venus*. Dir. by Chris Taylor, AI-assisted by Runway ML (visual effects and scene generation)

Use Examples: Visual artist paints over AI-generated backgrounds; writer substantially revises AI-drafted passages; photographer composites AI-generated elements

AI-GENERATED

3

AI creates the primary content from the creator's prompts and direction. The creator's role is conceptual, curatorial, and editorial.

Attribution: AI-generated by [AI Name], concept by [Creator Name]

Music Example: "Mars." AI-generated by Wondera, concept by Sofia Martinez (Martinez specified genre and mood; AI generated track; Martinez added transitions)

Use Examples: AI creates full image from text prompt; AI composes song from style parameters; AI generates video from scene descriptions
